Moving to “the cloud” is no piece of cake. So if your business wants to increase its cloud footprint, you need to think differently. Cloud migration may be perceived as a challenge, but with the right strategy, it can be managed effectively. Here are seven key reasons why cloud governance is a challenge:

1. **Uncertainty in Data Security**: Data security governance practices often remain undefined or are ignored, leaving organizations vulnerable to breaches.

2. **Inadequate Governance and Security Practices**: Organizations are failing to secure data in the cloud due to inadequate governance and security practices.

3. **IBM Innovation**: IBM inventors have patented a new invention that enables users to manage the location of their cloud data. This is a significant step forward in securing data in the age of mobile, cloud, and social networking.

4. **SafeNet and Ponemon Institute**: SafeNet and Ponemon Institute have confirmed that organizations are failing to secure data in the cloud due to inadequate governance and security practices.

5. **Cloud, Data Governance & Cyber Security**: Securing Digital Transformation: Although cloud computing is now widely accepted, security fears are becoming less relevant as organizations adopt cloud technologies.

6. **Data Governance in the Cloud**: The guide is focused on data-driven approaches to managing data in the cloud.
